PROFESSIONAL SUMMARY

Senior Android Engineer with 12+ years of end-to-end mobile development experience across fintech, drone technology, health tech, enterprise SaaS, and consumer apps. Recognized for deep specialisation in native Android (Kotlin, Jetpack Compose, MVVM/MVI), architectural ownership, secure and well-tested code, and delivering complex production apps independently.

Currently leading Android engineering at a Singapore-based drone-tech company, owning the full rewrite of a mission-critical DJI drone control app. Early adopter of Kotlin Multiplatform (KMM), Compose Multiplatform, and AI-augmented development (Claude Code, Gemini CLI, GitHub Copilot).

CORE SKILLS

Android Engineering: Kotlin, Java, Jetpack Compose, MVVM, MVI, Coroutines & Flow, Hilt/Dagger, Retrofit, Room, Firebase, TCP/UDP Sockets, DJI Mobile SDK, Android Keystore, AES Encryption, BiometricPrompt, CI/CD, Fastlane

Testing: Unit & UI Testing, JUnit, MockK, Mockito, Turbine, kotlincoroutines-test, Robolectric, OkHttp MockWebServer, Espresso, Compose UI Testing, UI Automator, Hilt Testing, Test Fakes

Cross-Platform & Emerging: Kotlin Multiplatform (KMM), Compose Multiplatform, WearOS, Large-screen & Tablet UI, IoT / Hardware Integration, Real-time Communication, Payment Gateway Integration

AI-Augmented Development: Claude Code, Gemini CLI, ChatGPT Codex, GitHub Copilot, Cursor IDE, Prompt Engineering, LLM Integration, Generative AI tooling

Architecture & Delivery: Multi-module Architecture, Google Recommended App Architecture, Offline-first, Gradle Convention Plugins & Version Catalogs, Baseline Profiles, System Design, Agile/Jira, Technical Mentoring, Hiring Interviews

PROFESSIONAL EXPERIENCE

Senior Android Engineer | Avetics Global Pte Ltd | Dec 2022 - Present | Singapore

Drone-technology company building enterprise UAV solutions for inspection, surveillance, and infrastructure monitoring.

- Owned the full rewrite of the flagship drone-control app from scratch in Kotlin, Jetpack Compose, Coroutines & Flow and Hilt, integrating DJI Mobile SDK with real-time camera feeds and autonomous flight. Now in production, with tablet-optimised layouts and Baseline Profiles that significantly cut launch time and UI latency.
- Defined a multi-module architecture based on Google's recommended app architecture (UI, domain and data layers, MVVM/MVI, UDF) with Gradle convention plugins, setting team-wide standards that reduced production crashes to zero.
- Designed TCP socket infrastructure for real-time, low-latency hardware communication, streaming live data to the UI with Kotlin Flow, plus an offline-first data layer (Room as the single source of truth) and Firebase Auth and Realtime Database.
- Built a secure firmware update flow for V-Line hardware: firmware is downloaded from the server and verified with an AES key protected by Android Keystore.
- Set up testing for the app: JUnit, MockK and Turbine for ViewModel and Flow logic, Hilt test modules that swap the DJI SDK and socket layers with fakes, and Compose UI tests for key flight screens.
- Mentored the 6-person Android team through code reviews, driving adoption of Compose, Hilt and unit testing.
- Championed AI-assisted development, embedding Claude Code, Gemini CLI and Cursor IDE into the team's daily workflow.

Android Engineer | GrowFolio (formerly Plentina) | Feb 2022 - Nov 2022 | Remote (US-based company)

Fintech startup accelerating access to credit and BNPL services in Southeast Asia (Philippines and Vietnam).

- Led Android development of the 'Plentina: Buy Now, Pay Later' app using Jetpack Compose and Kotlin Coroutines, enabling installment-based commerce for users across two Southeast Asian markets.
- Built early Kotlin Multiplatform (KMM) infrastructure and Firebase Cloud Messaging in the company's R&D initiative.
- Integrated multiple third-party payment gateways for reliable, low-friction transactions in the core purchase flow.
- Replaced callback chains with Kotlin Flow for async state, and tested checkout and repayment logic with JUnit, MockK, Turbine and fake payment gateway clients, plus Compose UI tests for purchase screens.

Lead Software Engineer II | Samsung R&D Institute Bangladesh | Oct 2019 - Feb 2022 | Dhaka, Bangladesh

R&D centre for Samsung Electronics, contributing to consumer health and smart home product lines.

- Developed health-tracking Android apps with server-side sync and Room persistence for Samsung's health ecosystem.
- Built WearOS companion apps for health activity monitoring, extending the health platform to wearable devices.
- Wrote JUnit and Mockito tests for data sync logic, in-memory Room tests for DAOs, and Espresso tests for core tracking screens; used fake sensor data to test WearOS features without a watch.
- Contributed to feature development in the Samsung SmartThings iOS application, showing cross-platform adaptability.

EARLIER EXPERIENCE

Android Application Developer | Kutumbita Bangladesh Ltd | Nov 2018 - Sep 2019 | Dhaka, Bangladesh

AI-powered workforce management platform for the garments industry.

- Designed and built Kinship.ai, an internal communication platform with real-time chat, event announcements, and leave management, using Socket.io and Firebase Cloud Messaging.
- Owned the full app lifecycle independently: architecture, development, testing (JUnit, Mockito, Espresso, fake socket client for reconnects), and Google Play Store release.

Founder and Lead Mobile Developer | Power GP BD Limited | Jan 2012 - Oct 2018 | Dhaka, Bangladesh

- Founded and led a mobile development company, delivering over 100 Android applications for phones, tablets, and Android TV across enterprise, B2B, and consumer clients.
- Worked directly with clients and stakeholders to turn their ideas into apps, owning requirement analysis, system design, development and deployment.
- Received two awards from the Facebook Startup Program in recognition of high-impact mobile application development.

SELECTED PROJECTS

V-Assist (Volarious) | Apr 2024 - Present

- Production application for drone-assisted line status monitoring; leveraged AI tools throughout the full development lifecycle for accelerated delivery. Published on Google Play Store.

Plentina: Buy Now, Pay Later | Feb 2022 - Nov 2022

- BNPL application live in two Southeast Asian markets, built on Jetpack Compose and Kotlin. Partnered with trusted retail and payment providers across the Philippines and Vietnam.

Samsung Health App with WearOS Integration | Oct 2019 - Jan 2022

- Comprehensive health tracking application with wearable integration, contributing to Samsung's consumer wellness product line.

EDUCATION

Bachelor of Science, Computer Science and Engineering

Ahsanullah University of Science and Technology | Dhaka, Bangladesh | 2007 - 2012

ADDITIONAL INFORMATION

Languages: Bengali (native), English (professional proficiency)

Location: Singapore (UTC+8); for remote roles, based in Bangladesh (UTC+6)

Open to: Remote roles (full-time or contract) and international relocation with visa sponsorship

Remote Work: No visa sponsorship needed; can work as a contractor or through an Employer of Record (EOR); can overlap with European working hours; 1 year of remote work with a US-based team (GrowFolio)

Work Authorisation: Bangladesh citizen; relocation roles require visa sponsorship

Development Profiles: GitHub: github.com/sabbirreyjohn | Stack Overflow: stackoverflow.com/u/1340537
